## >> Quick-changing Whizzy

A feeder of the series WHIZZY 210 BRO with a vertical dispensing unit inserts a promotional coupon between rolls of paper towels on a continuous packaging machine. Each couple of rolls moves forward and after a start signal one coupon is inserted in-between.

The blade is aimed at slightly distancing the close rolls (the picture shows Rolls progressing leftward) and so making the insertion easier, before the rolls are packed.

*The vertical dispensing unit inserts the coupon between the rolls*

*A specially designed guide  
To fit between the rolls.*

## >> What ?
